

AMENDMENTS TO THE CLAIMS

1.(Currently Amended) A system for proxy browsing the Internet, comprising:

a first computer linked to the Internet; and

a Proxy Browser Internet interface program hosted on said Internet linked computer; and

~~at least one second client computer or~~ an electronic appliance linked online to the Internet, wherein said electronic appliance comprises a unique Internet Protocol (IP) address, and said electronic appliance can actively receive electronic data transmissions from the Internet[[:]] .

5
A wherein ~~said first computer linked to the Internet contains said Proxy Browser program; said Proxy Browser sends~~ transmits a command with said electronic appliance IP address through the Internet that directs an Internet server to interact with ~~said second client computer or electronic appliance linked to the Internet, whereby said Proxy Browser directs at least one~~ transmit a remote digital file selected by said Proxy Browser program to download to said second client computer or to said electronic appliance IP address without said electronic appliance communicating with said proxy browser using said second client's Internet name or uniform resource locator (URL) number, and said digital file executing executes on said client electronic appliance without verification of said digital file execution by said proxy browser program.

2.(Canceled)

3.(Currently Amended) A system for proxy browsing the Internet according to claim 1, wherein~~[[:]]~~ said Proxy Browser Internet interface program ~~integrated with an Internet browser is a plug-in program to a browser~~ identifies said remote digital file and identifies an IP address of said electronic appliance, and

said Internet server verifies said IP address and verifies a transmission of said remote digital file without interaction of said proxy browser program.

4.(Currently Amended) A system for proxy browsing the Internet according to claim 1, further comprising:

an embedded Internet server located in said electronic appliance comprising configuration data ~~for said Proxy Browser containing Internet address information and~~ operating status data for said ~~at least one second client computer or~~ electronic device ~~linked to the Internet.~~

5. (Currently Amended) A system for proxy browsing the Internet according to claim 4, wherein~~[[:]]~~ said configuration data ~~for said Proxy Browser~~ is located within the Proxy Browser program, ~~a separate file on said first computer,~~ or on an said Internet server.

6.(Canceled)

7.(Currently Amended) A system for proxy browsing the Internet according to claim [[6]] 1, wherein[:]] said Proxy Browser program selects a digital recipe file from ~~an~~ said Internet server to download to said ~~home~~ electronic appliance, ~~where~~ wherein said home electronic appliance is an oven, and said server downloads said recipe file such that when said recipe file is executed, said oven is configured with baking instructions from said digital recipe file.

8. (Currently Amended) A system for proxy browsing the Internet according to claim 5
[[6]] 1, wherein further comprising:

a digital speaker online to the Internet and associated with a unique IP address, wherein said Proxy Browser program selects a digital music file from ~~an~~ said Internet server and sends said command to download said digital music file to said digital speaker IP address, and

said music file is downloaded and played on a said digital speaker ~~speakers~~ linked to the Internet.

9. (Currently Amended) A system for proxy browsing the Internet according to claim [[6]] 1, wherein[:]] said Proxy Browser program selects an Internet Web page, and said Web page is downloaded by said server into an embedded Internet browser ~~on said second client computer~~ server on said electronic appliance.

10. (Currently Amended) A system for proxy browsing the Internet according to claim [[6]] 1, wherein[:]] said Proxy Browser program selects a digital video file from ~~an~~ said Internet server, and

said Internet server downloads said digital video file ~~is played on said~~ onto a digital video player ~~lined~~ that is connected to the Internet.

11. (Currently Amended) A system for proxy browsing the Internet according to claim [[6]] 1, wherein[:]] said Proxy Browser selects a digital game configuration file from ~~an~~ said Internet server, and

 said digital configuration game file is downloaded to a game or toy that is linked to the Internet, and

said game file reconfigures said game or toy to provide new scenarios and strategies for entertainment.

12-14. (Canceled)

15. (Currently Amended) A program product comprising:

a proxy browser program located on a processor of a first computer, said proxy browser processing data from a plurality of hypertext markup language (HTML) pages[:]] said proxy browser program ~~having~~ comprising at least one language code source to make at least one function call to retrieve data from an HTML page on a

remote Internet server, said data from said function call displays on a video screen;

at least one configuration file on said processor of said first computer containing ~~configuration data to format and~~ an Internet Protocol address of a second computer ~~that is not networked to said first computer~~ ~~direct correspondence between said proxy browser and a host computer;~~

~~at least one configuration file containing configuration data to format and direct correspondence between said proxy browser and computing devices networked with said host computer,~~ wherein said proxy browser program transmits a command to said Internet server, said command directing said Internet server to transmit a remote digital file to said IP address of said second computer, said Internet server transmits said digital file to said IP address without said second computer communicating with said proxy browser program.

16. (Canceled)

17. (Currently Amended) a The program product according to claim 15, wherein ~~[[:]]~~ said second computer comprises said computing devices networked with said host computer ~~comprise~~ an electronic appliance having at least one central processor, memory coupled to said processor, and Internet networking capability.

18.(Currently Amended) A computer-implemented method for ~~processing on a first~~

~~computer the transmission of at least one digital file located on a second Internet server~~
~~computer to a third computing device, the method including the steps of proxy~~
~~browsing, comprising:~~

providing, on a first computer, ~~at least one computer having a processor and~~
~~networking configuration~~ capable of reading and executing a proxy browser program, a
networking configuration linking to the Internet~~[[,]]~~ and processing function calls to an
Internet server;

providing, ~~said third on a second computing device having computer, a~~
processor and memory coupled to said processor with the ability to transmit and receive
digital files transmitted through the Internet;

invoking said proxy browser program on said first computer to ~~implement~~ direct
said Internet server to cause a said transmission of at least one said remote digital file,
located on a second Internet server ~~computer[[,]]~~ using a determining the Uniform
Resource Locator (URL) of said ~~third computing device and saving said URL in~~ second
computer;

transmitting said remote digital file from said second Internet server to said ~~third~~
second computer device without said second computer communicating with said proxy
browser program; and

~~said third computing device~~ processing said transmitted digital file on said
second computer and performing output functions according to ~~the~~ a format and
language of said digital file.

19. (New) The system of claim 1, wherein said Internet server transmits said remote digital file to said electronic appliance IP address without said verification of said IP address or said file transmission by said proxy browser program.

20. (New) The system of claim 1, wherein said proxy browser program transmits a command to said Internet server that directs said server to transmit said remote digital file to a uniform resource locator address of said electronic appliance, said remote digital file transmission occurring without interaction or verification by said proxy browser program.

21. (New) A method for proxy browsing the Internet, comprising:

linking a first computer to the Internet;

hosting a proxy browser program on said first computer;

connecting an electronic appliance online to the Internet, said electronic appliance can actively receive electronic data transmissions from the Internet;

transmitting a command from said proxy browser program to an Internet server said command directing said Internet server to transmit a remote digital file to an Internet Protocol (IP) address of said electronic appliance;

transmitting said digital file to said IP address without said electronic appliance communicating with said proxy browser program; and

executing said digital file on said electronic appliance without verification of said

executing by said proxy browser program.

22.(New) The method of claim 21, wherein said transmitting said digital file comprises transmitting said remote digital file to said electronic appliance IP address without verification of said IP address or file transmission by said proxy browser program.

23. (New) The system of claim 21, wherein said transmitting a command from said proxy browser program comprises transmitting a command to said Internet server that directs said server to transmit said remote digital file to a uniform resource locator address of said electronic appliance, said remote digital file transmission occurring without interaction with, or verification by, said proxy browser program.

24.(New) The program product of claim 15, wherein said digital file executes on said electronic appliance without verification of said execution by said proxy browser program.

25.(New) The method of claim 18, wherein said transmitting comprises transmitting a command to said first Internet server that directs said first Internet server to transmit said remote digital file to said uniform resource locator address of said second computer without interaction or verification by said proxy browser program.
